

APPENDIX A:
**South Carolina Medicaid Management
Information System (MMIS) Technical
Environment**

The South Carolina Medicaid Management information System (MMIS) Technical Environment

The South Carolina MMIS is a mainframe based, batch oriented claims processing system. It currently resides on Clemson University's HDS Enterprise Server utilizing an OS-390 operating system. The MMIS is based on a network CA-IDMS/R database management system. Over 90% of the application programs are written in COBOL for MVS. IDMS ADS/O is used in the MMIS online component. The system currently accepts claims via paper, diskettes and tape directly from providers and/or vendors/clearinghouses. Most claims formats (paper and electronic) are SC Medicaid specific with the exception of the UB-92. Provider submitted claims are batched and processed nightly and payments are generated weekly. There is a point of sale component for pharmacy claims through a contract with First Health. While these claims are adjudicated at the point of sale, they are submitted to the MMIS weekly for inclusion in the weekly payment cycle. Medicaid Eligibility updates are performed by the Department of Social Services and are transferred nightly to the MMIS.

Currently MMIS data required by the point of sale pharmacy system is transmitted nightly to First Health. A Medicaid Eligibility Server is being developed. It is on a high availability platform that consists of 2 SUN 220R servers each containing a 450 MHz ultra sparc II processor and running Solaris 7 OS. The database software is Sybase's ASE 12.0.

An ADHOC reporting system (ARIES) resides on a Sun Enterprise 3000 server running Solaris 2.6. The software is Sybase ASE (Adaptive Server Enterprise) 11.5.1 and Sybase ASIQ (Adaptive Server IQ) 11.5.1.

A Medicaid Eligibility Determination System (MEDS) is currently under development. It too will reside on Clemson University's HDS Enterprise Server and will utilize a relational CA-IDMS/R DBMS. The online component for it will be IDMS ADS/O and the batch portion will be COBOL for MVS.

An ADHOC reporting system (ARIES) resides on a Sun Enterprise 3000 server running Solaris 2.6. The software is Sybase ASE (Adaptive Server Enterprise) 11.5.1 and Sybase ASIQ (Adaptive Server IQ) 11.5.1.

Technical Environment of MCCA

Medicaid Claims Control System (MCCA) is the contractor for South Carolina Medicaid non-pharmacy claims receipt and adjudication. They offer a variety of electronic media as well as paper for claims receipts. Paper claims are processed using MTT's 3.1 OCR software. The OCR system is on a FastEthernet (100 Mb/sec) based local area network (LAN) running Windows NT 4.0 Servers with Windows NT 4.0 as the desktop operating system.

MCCA sends the OCR'd and electronic claims to Clemson University daily via a dedicated 56KB RJE connection for inclusion in the payment process. The RJE system is on a FastEthernet (100 Mb/sec) based local area network (LAN) running NOVELL 5.1 Servers with Windows 95 as the desktop operating system. MMIS then produces the payments to providers which are printed and mailed by MCCA.

The MCCA system has all major hardware, software and support components located in multiple locations at the Blue Cross Blue Shield corporate headquarters in Columbia, SC. TCP/IP is the standard communication protocol for the LANs.

CS-SURS Technical Environment

CS-SURS is a standalone network that operates on an OS/2 platform with Novell Netware managing the network communications. There are no interfaces with the DHH LAN. The network has separate Cat 5 cabling running through the network closets on each floor connecting the servers in the Mezzanine to the three user floors. Access to the closets is restricted to _____. There is 100BGT connection between the machines on the network. It consists of:

- 8 User Workstations located on three floors of the DHH building. These machines are accessible by authorized users only, for use in parameter maintenance, run submission and viewing/printing reports. There is no data maintained on these machines, only Parameter Data Bases (PDBs) created by the users. These can be backed up by the user to the local Workstation drive and to the CS-SURS Network servers. Special CS-SURS network drive letters are used for this purpose and are viewable from the Workstations.
- 8 Application Servers (PCs) located in the secured DHH Server Room on the Mezzanine floor of the building. All the network machines, except the Workstations, are located in the DHH Server Room. These are 1 ghz, Pentium II PCs used to process runs submitted by users from their workstations. No data is resident on these machines. Once a run is processed, all temporary files are deleted automatically. These machines are have RAID-0. Besides being used to process runs submitted by users from their workstations, they are also used each month to update history on the Data Server.
- One Data Server running on Novell which contains all the history data and reference files for use in processing runs. Security linked to this server controls access to the Novell Network. This server has a tape drive for back. It is set up for nightly automatic backup of the Data and Report Servers. It has RAID-5 protection.
- One Report Server on which all report output resides. The machine also has a tape drive for regular report backup and RAID -5 protection. This machine contains the Run Request Broker and the Application Security Server, both maintained remotely by UPI.
- Data extracted form the MMIS histories by Clemson on a monthly basis copied to tape and sent to DHS. Authorized DHS staff load tapes to two update PCs. The Novell Security controls the authorization for this administrative function with User ID security. The CS-SURS programs manage the sorting of the data and update of the history. The application servers are also used for updates so that up to 9 file sequences can be running updates at the same time. When updates are run, the history being updated and the update files are saved and the

prior month are deleted. This means the history can be recreated locally if there is a problem with files, e.g., purge parameter is set wrong and more history than desired is deleted.

- Software based security protects access to secure data. It also controls the level of functionality accessible by ID. Novell Logins IDs provide this along with CS-SURS and J-SURS Viewer based security enforcement based on User ID.
- There is a dedicated ISDN line between UPI offices and the DHS CS-SURS Network. There is no internet access. ISDN Routers with Service Provider Profile Identifier enforced security through CISCO 800 series routers assure that only authorized UPI technical and user support personnel can access the secure data outside the State facility. This is allowed for remote technical support and training only.

Technical Environment of First Health Services Corporation

First Health Services Corporation is the contractor for South Carolina Medicaid pharmacy claims receipt and adjudication. They offer point of sale, paper and magnetic media for claims receipts. The MMIS produces these the payments to providers, however. Each week, First Health Services Corporation sends the claims to Clemson University for inclusion in the payment process.

First Health Services Corporation provides a POS/Pro-DUR system with all major hardware, software and support components located at First Health Services corporate headquarters in Glen Allen, Virginia. State users gain access to the system by connecting to a Windows NT Terminal Server through a 256K fractional T1 line from Columbia, SC to the First Health Services facility in Glen Allen, VA. The Windows NT Terminal Server is connected to an IBM system 390 and a SQL Server database located in the corporate data center that performs all of the system processing and reporting functions.

Technical Environment of OASYS

OASYS builds and maintains a FastEthernet (100 Mb/sec) based local area network (LAN) running Windows NT 4.0 Servers with Windows 2000 Professional as the desktop operating system. The OASYS network accesses the SCDHHS network via a domain trust relationship.

OASYS maintains a wide area network (WAN) connection to the SCDHHS network via a T1 data line. TCP/IP is the standard communication protocol for both LAN and WAN.

**Medicaid Professional Services (HIC)
Direct Billing Specifications**

The purpose of this document is to advise you of the steps which must be taken to begin billing for Medicaid professional services via magnetic tape, diskette, CD-ROM, ZIP disk, or cartridge (also referred to as direct or electronic billing.) Principal advantages of direct billing include faster payments and reduced billing errors, thereby lowering the incidence of rejection.

The **South Carolina Professional Services Direct Billing Specifications** contains the information necessary for accurate submission of claims via these media, thus ensuring the most timely processing of South Carolina Medicaid claims possible.

Once you are ready to test your file format, please send a test file and completed transmittal form to the address below. Mark on your transmittal form that these are TEST claims. You will be notified as to whether the file format was acceptable. We must also have a signed Electronic Media Billing Agreement from you once your test format is found to be satisfactory. This will enable you to bill electronically by tape, diskette or cartridge.

If you have questions related to the specifications or the procedure, please contact the Division of Information Systems Management at (803) 898-2610.

Submit test files to:

**GUIDE LINES FOR PREPARING RECORDS FOR THE
UB92 CLAIM FORM**

RECORD SEQUENCE:

Follow the record sequence as outlined with each record.

RECORD REQUIREMENTS:

Records 01 and 99 are required on every file and will occur only one time.
No data will be utilized from these records at this time.

Record 10 is required at the beginning of each provider batch and Record 95 is required at the end of each provider batch. No data will be utilized from these records at this time.

Records 20, 30, 40, 50(IP), 60(IP), 61(OP), 70, 80, and 90 are required for every claim.

Record 31 is required only for replacement, void/cancel claims.

Record 41 is required as dictated by the use of value and/or condition codes.

Only the records accompanying this documentation will be utilized by Medicaid at this time.

MONEY FIELDS:

All input money fields must be positive. If your system uses signed fields, you may input a signed amount, however, all money fields will be considered positive regardless of the sign.

NOTATIONS:

On the enclosed records;

'**' Denotes required field

'*!' Denotes field may be used as needed

Data in fields without '**' or '*!' will not be utilized.

'FL' refers to the form locator in your UB92 manual.

GENERAL INFORMATION FOR RECORD 01
(PROCESSOR DATA)

- Must be the first record on the file.
- Will signify the beginning of a batch and should occur only one time.
- No data will be utilized from this record at this time.
- Must be followed by Record 10.

**GENERAL INFORMATION FOR RECORD 10
(PROVIDER DATA)**

- Must be preceded by either Record 01 or 95.
- Will signify the beginning of a Provider batch combination.
- Should occur only one time for each Provider.
- Must be followed by Record 20.

GENERAL INFORMATION FOR RECORD 20
(RECIPIENT DATA)

- Must be preceded by either Record 10 or 90.
- All records that follow, up through Record 90, **MUST** have the same patient control number.
- Must be followed by Record 30.

GENERAL INFORMATION FOR RECORD 30
(THIRD PARTY PAYER)

- Must be preceded by Record 20.
- Must be followed by either Record 31 or 40.

One third party payer record packet (Record 30 - 31) must appear in the bill record for each payer involved in the bill. Each third party payer packet must contain a Record Type 30. However, each Record Type 30 may or may not have an associated Record Type 31 depending on the specific third party payer data required by the particular payer.

The sequence numbers for Records 30 and 31 must represent the same payer and are designated as follows:

- Sequence 01 represents the primary payer.
- Sequence 02 represents the secondary payer.
- Sequence 03 represents the tertiary payer.

**GENERAL INFORMATION FOR RECORD 31
(THIRD PARTY PAYER)**

- Must be preceded by Record 30.
- Required when submitting a replacement or void/cancel claim.
- Must be followed by Record 40.

One third party payer record packet (Record 30 - 31) must appear in the bill record for each payer involved in the bill. Each third party payer packet must contain a Record Type 30. However, each Record Type 30 may or may not have an associated Record Type 31 depending on the specific third party payer data required by the particular payer.

The sequence numbers for Records 30 and 31 must represent the same payer and are designated as follows:

- Sequence 01 represents the primary payer.
- Sequence 02 represents the secondary payer.
- Sequence 03 represents the tertiary payer.

**GENERAL INFORMATION FOR RECORD 40
(CLAIM DATA)**

- Must be preceded by either Record 30 or 31.
- Only one sequence of this record will be accepted.
- The maximum number of Occurrence codes that will be accepted is eight.
- Must be followed by either Record 41, 50, or 61.

If the code the occurrence code field is over 69, the two date fields following that code are associated with it, and the field following the first date is zero. If the code indicated in the occurrence span code field is less than 70, only the occurrence span from date is completed. The code and date is interpreted as an occurrence code.

Similarly, if the code in the occurrence code field is M0-A9, the two date fields following that code are associated with it, and the field following the first date is zero. If the code indicated in the occurrence span code field is A1-L9, only the occurrence span from date is completed. The code and date is interpreted as an occurrence code.

GENERAL INFORMATION FOR RECORD 70
(MEDICAL DATA)

- Must be preceded by either Record 50, 60 or 61.
- Only one sequence of this record will be accepted.
- Must be followed by Record 80.

GENERAL INFORMATION FOR RECORD 80
(PHYSICIAN DATA)

- Must be preceded by Record 70.
- Only one sequence of this record will be accepted.
- Must be followed by Record 90.

**GENERAL INFORMATION FOR RECORD 90
(CLAIM CONTROL)**

- Must be preceded by Record 80.
- Will signify the end of a claim.
- Must be present for every claim whether or not the Remarks field is utilized.
- Must be followed by either Record 20 or 95.

GENERAL INFORMATION FOR RECORD 95
(PROVIDER BATCH CONTROL)

- Must be preceded by Record 90.
- Will signify the end of claims for a provider and should occur only one time for each provider.
- No data will be utilized from this record at this time.
- Must be followed by either Record 10 or 99.

GENERAL INFORMATION FOR RECORD 99
(FILE CONTROL)

- Will signify the end of file.
- No data will be utilized from this record at this time.
- Must be the last record.
